Warnings!

- ⚡ Light under protection class 1, the yellow and green protective conductor (mains) has to be connected to the protective earth terminal.
- ⚡ Light under protection class 2, Lights carrying this symbol must not be connected to a protective conductor.
- 🔥 Lights carrying this symbol may be mounted on normal, flammable materials.
- 📏 This Symbol defines the minimum distance between the bulb and the lit normal flammable surface.

To avoid personal injuries and damages, defective outer cables of the lamp must be replaced by a suitably qualified specialist.

Turn off your light before cleaning. Do not damp clean near connections of current-carrying parts. To avoid stains do not use any cleaning agents for finishes (e.g. brass or chrome).
